

PEDAL OPERATED AUTOMATIC EYELETTING MACHINE

16FEI

Entirely pneumatically powered, this machine automatically punches a hole and inserts the eyelet and washer to complete the fastening in a single operation. Eyelets and washers are fed automatically by means of hopper fed raceways. The washer, either toothed or necked, is positively positioned by a slide mechanism at the bottom of the washer raceway.

The machine is delivered set for the specified size of eyelet and comes on its own bench and with a toolkit. The 16FEI is tremendously strong, capable of setting eyelets with hole up to 15mm when closed (size 30 Sail and No 4 Grommet).

Also available is the 29F machine which is the same as above but does not include washer feed.

Specification

Height	166cm
Weight (inc bench)	126Kg
Throat Depth	100mm
Power Supply	Pneumatic 6 Bar
