

# Curtain Eyelet Machines

## AP2

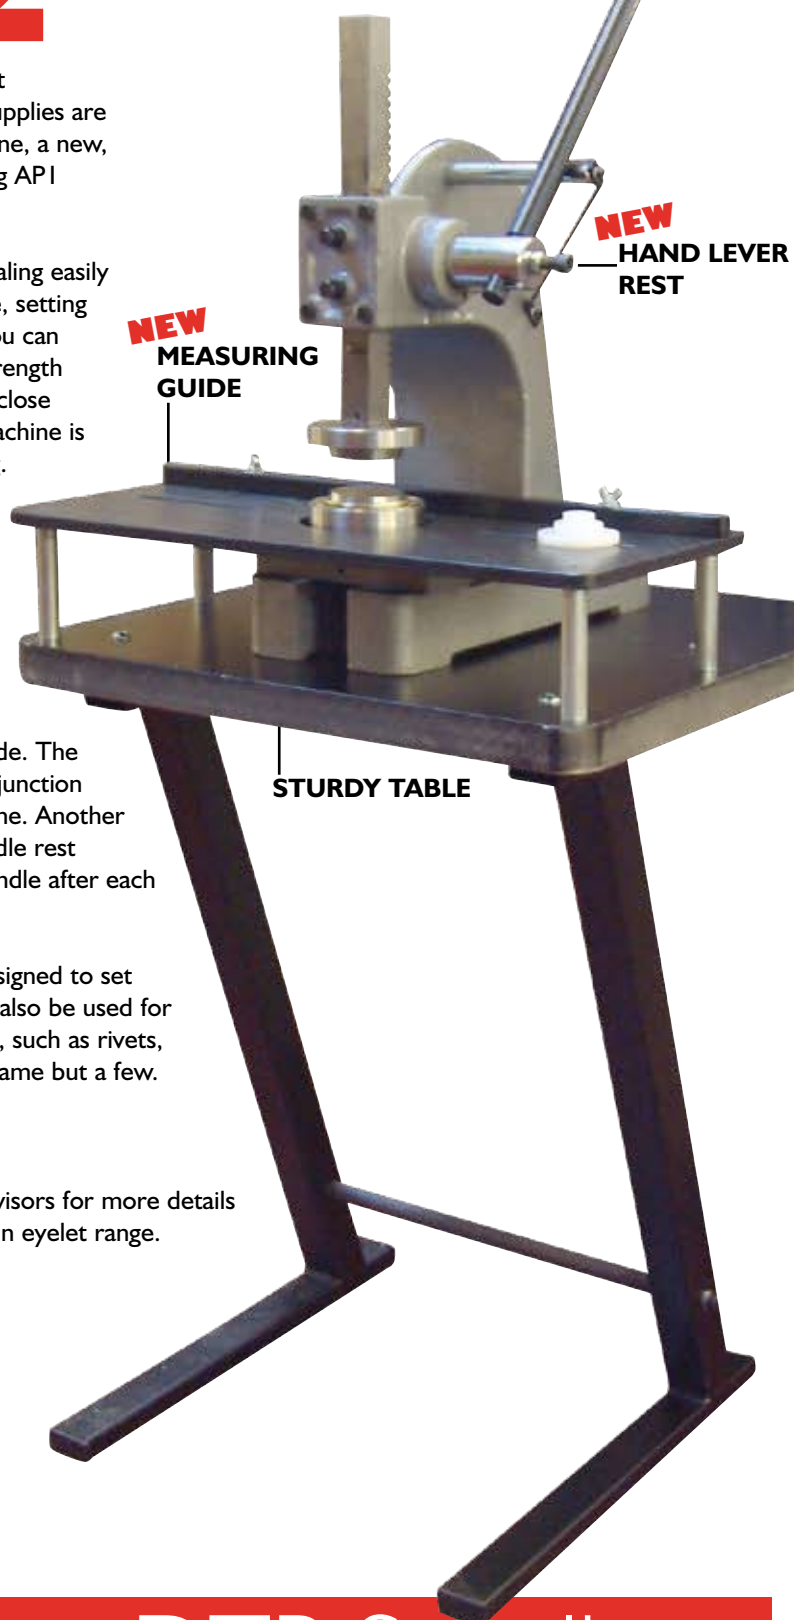

In line with our continuing product development programme, DTP Supplies are pleased to present our AP2 machine, a new, heavier duty version of the existing AP1 machine.

The AP2 machine is capable of dealing easily with all of our curtain eyelet range, setting all sizes with far less effort than you can imagine. The additional integral strength of the machine makes it easier to close eyelets but also means that the machine is terrifically robust and hardwearing.

An exciting new option for the AP2 machine is our measuring guide which enables accurate placing of the eyelets into your curtains. The measuring guide allows accurate placing of the eyelet both from the top of the curtain and also from the side. The measuring guide is supplied in conjunction with a sturdy bench for the machine. Another new feature is the very useful handle rest making it easier to retrieve the handle after each operation.

Whilst the AP2 was specifically designed to set our range of curtain eyelets it can also be used for setting a variety of other fasteners, such as rivets, press fasteners and cord clips to name but a few.

Please contact our skilled sales advisors for more details of the AP2 machine and our curtain eyelet range.
