

Hand Closing Tools

Designed for low volume setting of sail or grommet eyelets, these two piece tools are typically employed in tarpaulin, flag and sail making applications.

Wad punches facilitate pre-piercing operations and complement setting tools which, although purpose designed for particular eyelets, are normally available ex stock.

One off special hand closing tools for all types of fastener can also be supplied.

Widely used on prototypes, one-offs, short production runs and in model shops, this practical hand operated plier type tool is particularly suited to low volume setting of lightweight eyelets.
