

PEDAL OPERATED AUTOMATIC EYELETTING MACHINE

M2

The M2 machine is a dual feed, fully automatic machine which automatically punches a hole and inserts the eyelet and washer to complete the entire fastening in one operation. Eyelets and washers are fed automatically by means of hopper fed raceways. The washer is positively positioned by a slide at the bottom of the washer raceway.

The machine can also be supplied set to insert press fasteners (two machines required), jeans buttons, rivets with washers and double tubular rivets.

This machine is tremendously robust and reliable, capable of setting eyelets with hole up to 9mm when closed (size 24 Sail or No 0 Grommet). The standard M2 machine has working (throat) depth of 85mm but it can also be supplied with throat depth of 185mm.

The machine is supplied table mounted.

Specification	
Height	140cm
Weight (inc bench)	68Kg
Throat Depth	85mm
Power Supply	Electric (220V single or 380V 3 phase) Pneumatic (6 bar)
